DOWN AND FEATHERS

...envelop you softly and gently because we only select the best down for our products. Especially cosy, it has heat-insulating and temperature-regulating effects unlike hardly any other material. Perfect for high standards – and for you!

CARAT

CARAT

THE GOOSE DOWN DUVET

A first-class modern and flexible duvet system – for individual solutions. The system: three excellent duvets, the CARAT light, medium and warm, with a filling of 100 % Masurian goose down and the finest cover of Egyptian long staple cotton. All duvets can be purchased separately or in pairs, they can be used separately or be combined later in many different ways. All duvets have a unique buttonhole system. Start with the light duvet for summertime – for colder nights, one partner can add the medium duvet and the other can use the warmer duvet. It's up to you.

The detachable button system to combine the duvets

SAPPHIRE

SAPPHIRE

THE GOOSE DOWN DUVET AND PILLOW

A special contemporary style for those with high standards for sleeping comfort.

The Duvet

The intricate hand-made construction of square boxes in the center using finest quality batiste holds the premier Hungarian goose down in position in the most important zone of the duvet. The sumptuous rim divided at strategic spots and filled to perfection, gives superb drape around the body for luxurious warmth. An imposing piece of modern duvet design made with skill and care for exceptional comfort.

The Pillow

Designed to be a partner to the already successful SAPHIRE down duvet this special pillow has a unique design and stitching pattern. It has three separate chambers which run along the length of the pillow, one at the top edge, one at the bottom and a central wider section. The outer edge chambers are packed firmly to give edge support for shoulder or neck while the central chamber offers the exceptional softness and comfort

MULTIPLE OPTION

MULTIPLE OPTION

THE GOOSE DOWN DUVET

The system: Four exquisite duvets, the OPAL, the CRYSTAL, the PEARL and the GEM, all have premier Hungarian goose down filling and the finest casings. Each of the duvets can be purchased separately, or in pairs, used separately or later combined in up to ten different ways. The four duvets each have a unique system of strong, lightweight stainless nickel-free metal press studs. You purchase any of the duvets that you need now, and then add to it at a later stage, if required, by joining together any combination of two. If, or when, you feel the need to add to your duvet, as the seasons change, this system gives the complete solution to suit your individual needs and puts you in control. It is no surprise that these products have been near the top of our sales league for many years. They represent great value for money and combine modern technology and BRINKHAUS craftsmanship beautifully.

CROWN

CROWN

THE GOOSE DOWN DUVET WITH UNIQUE PATTERN
DESIGNED IN GERMANY

The sophisticated honeycomb construction is especially well suited for down duvets. This construction gives the down optimal space for distribution and development. It provides optimal thermal insulation and air circulation. This helps to keep the down airy and dry for a long time.

Our honeycomb cassette duvets are unique. This type of construction is exceptional and has been registered as a utility model at the German Patent and Trademark Office. Each cassette duvet is custom made in our Factory.

Protected cassette honeycomb quilting enables optimum distribution of the down in the chamber.

The removable snap button system to combine the duvets

FOR ALL SEASONS

FOR ALL SEASONS

THE GOOSE DOWN DUVET

This classical, highly versatile combination of three duvets in one has been developed over the years for ultimate sleeping comfort. The lighter duvet for summer, heavier weight for autumn and, by joining them together with the strong, lightweight, stainless nickel-free metal press studs, for full extra warmth on those cold winter nights. Using top grade white European goose down from the best sources in Europe provides loft for insulation and lightness for freedom and comfort. Both of these duvets are encased in a superb, top-quality, fine-combed Egyptian long staple cotton.

THE GOOSE DOWN DUVET

ESSENTIAL PURE

ESSENTIAL PURE

THE DUCK DOWN DUVET

ESSENTIAL PURE

THE DUCK DOWN DUVET

This collection has been specially designed for maximum sleeping comfort and flexibility. Our duvets are made from a high-quality fabric of fine 100 % Egyptian long staple cotton batiste with peach skin finishing, which not only provides a luxurious feel against the skin but also offers numerous advantages. The peach skin finish adds an extra soft, velvety touch to the fabric, enhancing comfort.

The filling of our duvets consists of 90 % premium duck down, valued for its excellent insulating properties. This down provides optimal thermal insulation while being lightweight, allowing you to feel comfortable all year round – no matter the season.

Another feature of our ESSENTIAL PURE collection is the removable snap buttons, which enable you to combine the duvets according to your individual needs. Whether you need a light duvet for summer or a warmer option for winter, the simple assembly of the individual pieces allows you to adjust your personal comfort temperature at any time.

Enjoy the perfect synergy of functionality and style with our ESSENTIAL PURE collection – for restful nights and a relaxed start to your day!

THE ALPACA WOOL-FILLED DUVET

Discover ultimate comfort with our duvet and matching pillow, both beautifully quilted with high-quality alpaca wool. This luxurious combination not only features stylish design but also offers unparalleled warmth and softness.

The duvet is equipped with practical press studs, allowing you to customise it to your liking—perfect for any season and sleep style. The gentle alpaca wool ensures that you feel cozy and secure every night.

The pillow perfectly complements this comfort experience; it features a removable cover that is also quilted with alpaca wool. The inner pillow is generously filled with goose feathers, providing optimal support and a delightful resting sensation.

Indulge in this harmonious combination of duvet and pillow, transforming your bedroom into an oasis of relaxation and luxury!

TIBET & MAHDI

TIBET & MAHDI

THE CASHMERE & CAMEL HAIR-FILLED DUVET

Combining lightness and warmth with luxurious drape, the TIBET cashmere-filled duvet is the ultimate alternative filling for those who do not want synthetics or down. Using the down equivalent, i. e. the soft fine undercoat hair of the Cashmere goat, we have created a highly absorbent luxurious filling offering outstanding heat retention and exceptional comfort.

Only the finest undercoat is used to manufacture the filling in these high-class camel hair duvets. Camel hair fleece assures silkiness and cosiness. The hair offers a high filling volume. Refined fine satin in 100 % Egyptian long staple cotton envelops the high-class filling. The light version is the ideal duvet for warm summer nights and the four seasons combination duvet is perfect for the cold season.

TENCEL™

TENCEL™

THE DUVETS & PILLOWS WITH TENCEL™ LYOCCELL FIBERS

TENCEL™ Lyocell is made from wood, a natural and renewable raw material carefully sourced from responsibly managed forests. The wood taken from nature is purposefully balanced with forest growth rates, to ensure the continued availability of this valuable resource.

The structure of TENCEL™ Lyocell fibers allows the absorption and release of moisture. In the final textile product, these effective moisture controlling properties support a drier microclimate on the skin.

TENCEL™ Lyocell fibers are naturally soft and smooth to the touch.

TENCEL™ Lyocell fibers are certified with the EU Ecolabel for environmental excellence (license number: AAT/016/01)

TENCEL™ is a trademark of Lenzing AG

EXQUISIT

EXQUISIT

THE WOOL-FILLED COLLECTION

THE DUVET

Wool protects against heat and cold. Its strong curl makes it possible to retain a large quantity of air. Without this curl, the insulating effect would not be achieved. This guarantees a constant temperature allowing the body to remain warm and dry while sleeping. The BRINKHAUS fine maco satin cover is both flexible and beautiful allowing air to pleasantly circulate around the body. Thanks to these features and its great thermal insulation, this sheep wool duvet is a well-earned luxury for many people.

THE MATTRESS PAD

Wool is the ideal filling to use as a comfortable, loose cover topper, especially for those who seek extra relief from aches and pains at night. It gives comfort, warmth and additional moisture protection to the mattress underneath. The EXQUISIT mattress pad has a casing of fine Egyptian long staple cotton satin and is held on the top of the mattress with strong, wide elastic corner straps. Suitable for a mattress with a height of up to 30 cm.

THE PILLOW

The Exquisit pillow is a 100 % pure new wool pillow that offers a wonderfully supportive medium feel and is one of the finest on the market. The cover is a fine satin 100 % Egyptian long cotton staple cotton cover, with a 218 thread count and silk protein finishing for a softer touch.

LOW ALLERGY

INFORMATION FOR PEOPLE SUFFERING FROM HOUSE DUST MITE ALLERGIES

What is house dust?

No two homes produce the same kind of house dust; in fact it will even differ between rooms. House dust normally consists of human and animal hair and skin cells, textile fibres, bacteria and mould, algae and dust mites. Each of these components may trigger an allergy but most people who suffer an allergic reaction to house dust are affected by dust mites and their excrement.

The mite

Mites have shared our homes for thousands of years. They are relatives of the spider, are around 0.3 mm long and cannot be seen with the naked eye. They feed on shed animal and human skin, multiply very quickly and produce around two thousand times their own bodyweight in excrement in their short lives. Since around 1964, we have known that it is this excrement that contains the allergens responsible for house dust mite allergy.

The preferred environment

House dust mites like a warm, damp and dark environment. Temperatures of between 20 and 30 °C and a relative humidity of 65 to 80 % are ideal for them. Carpets, upholstered furniture and beds are where you will commonly find these mites, so it is these areas that require treatment, i.e. regular and thorough cleaning.

Bed and bedding tips

House dust mites and most importantly their allergenic excrement can only be eliminated through regular and radical removal. Chemical treatments are not recommended for bedding as it comes into contact with the body. The only solution for sufferers is to regularly wash all bedding at as high a temperature as possible (95 °C) to effectively kill any mites present. Mattresses should be fitted with a special cover which can also be washed.

The dust mite barrier covers with zip for a quick and easy cover change

As a natural plant source material cotton is a serious option for those who seek alternatives to chemicalbased fillings and cannot use animal-based fillings such as down, cashmere, wool or silk.

THE QUILT

As such, the cotton quilt becomes an increasingly popular alternative to traditional bedding, as cotton offers high moisture absorbency and makes an extremely light comfortable duvet. Naturally, we use only the finest pure cotton for filling and combed Egyptian cotton satin for the casing, but at BRINKHAUS our technicians go even further. Although when washed at 60 °C most allergens are removed, the MORPHEUS® range of products can be laundered from time to time at temperatures up to 95 °C for even greater control of the sleeping environment. Moreover, the quilt is designed as a medium-light summer weight quilt.

THE MATTRESS PAD

The MORPHEUS® Cotton 95 °C mattress pad is an extremely comfortable addition to the top of the mattress and fits underneath the bottom sheet. The pad is of deep rectangular quilted cotton in a fine cotton casing and is fitted with wide elastic corner straps to quickly and easily fit over the mattress itself. The soft natural absorbent cotton adds extra luxury and comfort to the mattress top and like the MORPHEUS® Cotton 95 °C quilt the pad is designed to be laundered at high temperature to remove allergens. As well as providing natural comfort for allergy control, the pad will add additional softness and comfort to an ageing or hard mattress. When laundering the mattress pad it should be reshaped whilst still damp. Initially it may seem as though it has shrunk but will expand to the correct size during use.

Suitable for a mattress with a height of up to 30 cm

DUST MITE BARRIER

The special MORPHEUS® bedding is for people who suffer from house dust mite allergies and all those people who react sensitively to environmental influences. These casings are particularly suitable for the modern bedding requirements of people suffering from house dust mite allergies. They need covers made of a particularly dense 100% cotton fabric. An additional mechanical finishing ensures that penetration by house dust mites is out of the question. As a result, an additional coating is not necessary. The dust mite barrier completely encloses the covers. In this connection, a select combination of materials permits regular washing at those temperatures, which ensure that house dust mites and other microorganisms are effectively killed off. It can be washed at 95 °C and tumble dried for extra hygiene control.

TEXTILE FIBRE

Do you lead an eventful life? Place high value on comfort and hygiene? Ranging from cosy duvets to duvets with elaborate functionality, the selection of textile fibres will surprise you. Easy to launder and absolutely cosy. The high-quality all-round talent for individual sleep requirements. The custom-fit corners guarantee a perfect fit.

CELESTE

CELESTE

THE "DOWN TOUCH" DUVET

CELESTE

THE "DOWN TOUCH" DUVET

Welcome to the world of CELESTE – where comfort and innovation meet. Our duvets are filled with unique Air-Fill® polyester fibers, providing an unparalleled sleeping experience. The special construction resembles that of a classic down duvet, with lovingly stitched squares that not only create an appealing look but also regulate warmth.

While our CELESTE duvets offer the luxurious feel of down, they are completely free from animal products. The breathable filling ensures you feel comfortable all year round, whether in winter or summer.

A special highlight of our collection is the "DOWN TOUCH," which gives you the soft and cosy sensation of a down duvet. Additionally, the CELESTE collection includes pillows that are designed to provide a similar feeling as if you were lying on down. These pillows are also filled with Air-Fill® polyester fibers, offering you the perfect comfort for a restful sleep.

Experience the different with CELESTE; lightweight, cosy yet durable. Treat yourself to the luxury of duvets and pillows that provide you with the comfort of down without compromise.

CLIMASOFT

CLIMASOFT®

THE CLIMASOFT® WITH OUTLAST® COLLECTION

The innovative Outlast® technology was originally developed for the NASA. It proactively regulates the balance between temperature and humidity. Temperature variations beneath the quilt are indirectly balanced thanks to the patented Outlast® micro-capsules. Surplus body warmth is both absorbed and stored to prevent overheating. This results in a constant sleeping temperature and improved sleep. The casing perfectly combines the natural capacity of cotton – rapid conduction of humidity – with the ability of the Outlast® PCM molecules in the filling to store warmth.

OUTLAST BAYFIELD

OUTLAST® BAYFIELD

WITH OUTLAST® TECHNOLOGY

OUTLAST® BAYFIELD

WITH OUTLAST® TECHNOLOGY

The Outlast® technology, originally developed for NASA, regulates the temperature of textile materials by absorbing, storing, and releasing heat. It proactively responds to changes in skin temperature, optimizes thermal balance, and reduces sweating, which leads to significantly higher sleep comfort. Outlast® products, known as phase-change materials, actively help to balance temperature and significantly reduce moisture during sleep.

THE BAUSCHI® COLLECTION

Polyester fibres are the man-made alternative to natural fillings for those who prefer, or who must use, synthetic fillings. At BRINKHAUS, we use premier Thermofill® fibre, which is a top-quality supple hollow polyester filament; this is both soft and has good insulation properties. This top quality polyester filling is encased in the finest quality cotton satin casing, making the items soft and beautifully supple, a real luxury item. Machine washable, this is a superb example of the art of BRINKHAUS applied to a man-made filling – luxury at its best.

PILLOWS AND CUSHIONS

... are cosy and gently support the head and neck.
They are an important contribution to restful sleep
and can actively prevent tension as they support
the head and neck perfectly to promote an ergonomic
sleeping position - for high demands in sleeping
comfort and restful nights.

PILLOWS

JADE & HUNGARIAN GOOSE DOWN

PILLOWS

JADE

This is a natural, beautiful, soft and luxurious pillow with an outside baffle edge that is designed to allow the mature full-sized goose down filling to give loft and support up to the outermost edge of the pillow. This allows the head to rest in the centre of the pillow whilst the baffle edge nestles against the neck and shoulder for excellent comfort, especially for those who prefer to sleep on their side.

PREMIER HUNGARIAN GOOSE DOWN

Arguably the most widely-sold pillows from our product range, a must-have for anyone who loves the feeling of pure luxury and maximum sleeping comfort. The Hungarian Goose Down Pillow impresses with a casing made of 100% Egyptian long-staple cotton satin and a filling of new white Hungarian goose down.

THE MULTIPLE OPTION GOOSE DOWN PILLOW

SPECIFICATIONS

Casing	fine 100 % Egyptian long staple cotton twill, Nomite® and Daunasan® certified, downproof, TC 234	
Filling	outer pillow	new white Hungarian goose down, class I, DIN EN 12934, 90 % down
	inner pillow	new white European goose feathers and down, class I, DIN EN 12934, 85 % feathers / 15 % down
Design	outer pillow with zipper, with white satin piping	
Washable	up to 60 °C (both parts of pillow wash separately)	
Colour	white	

Product	Product Code	Size in cm	Filling Weight
MULTIPLE OPTION PILLOW SOFT + MEDIUM			
	21758	50 x 75	360 + 350 g
	21759	50 x 90	440 + 410 g
	21800	50 x 70*	330 + 330 g

This “multiple option” pillow combines design and craftsmanship in order to create highest comfort. The filling of the outer cover is divided into 3 chambers on each side in order to avoid movement of the filling during use. The inner pillow – also divided into 3 chambers – can be easily removed if necessary. Thus offering multiple options for each person’s individual requirement.

Removable inner pillow
to adjust the pillow individually

A pillow with special comfort for side sleepers. The well-known principle of a 3-chamber-pillow like DOWN SURROUND is combined with the elegant shape of peripheral outer baffle, which provides additional support and loft.

PILLOWS

LUXURY TWIN & DOWN SURROUND

PILLOWS

An innovation amongst comfort pillows – two different fillings have been combined into one pillow. The two halves are completely separated by a central layer of cotton which acts like a “hammock”. This enables the full benefit of the softer side to be enjoyed without sinking too far into the pillow, giving softness with support. The softer side provides excellent sleeping comfort whereas the firmer feather and down side gives the support. Use the firmer side to sit up to read in bed and sleep on the softer side. An ideal guest bedroom pillow – a soft or firm pillow to choose from in one pillow.

Made exactly as it is described, the DOWN SURROUND pillow enables BRINKHAUS craftsmen to bring together manufacturing know-how and ingenious skill to produce a new and very comfortable pillow. This has a central tubular core case filled with a feather and down mixture, which is surrounded by an 80 % goose down and 20 % feathers mix beneath the outer case thus giving real softness at the point of contact and yet “body” which comes from the central core mixture.

LUXURY TWIN

PILLOWS

EVERYDAY

PILLOWS & CUSHIONS

Here we have our collection of down and feather filled pillows for everyday use. The head and sensitive neck region need a supporting and relieving pillow that masters the diverse stress in the night. The DUCK FEATHER AND DUCK DOWN PILLOW supports the head through a combination of elastic feathers and snugly soft down. Only filling material with a high durability will master these permanent stresses. Our pillows, the BOUDOIR and FEATHER PILLOW, provide the excellent finishing touch to any bed ensemble for decorative purposes.

DREAM ZONE PURE 5-CHAMBER PILLOW WITH SUPPORT			
5-chamber-construction, box-construction	74676	approx. 43 x 70* suitable for covers 50 x 75	980 g

This high-quality, light filling made of the ultra-fine AIR-FILL® functional fibre is extremely breathable and moisture-regulating resulting in a dry and warm sleeping climate. The functional fibre has been refined to create numerous tiny air pockets rather like down. AIR-FILL® functional fibre has high insulation properties facilitating the light fill weight of the duvet and similar to that of modern ski jackets.

These BRINKHAUS neck support pillows offer perfect anatomical positioning of the head and shoulders for those who sleep on their side and back. Various heights, forms and proportions of bolsters provide variable support.

The combination of temperature-variable viscoelastic core with a soft gel layer and promises a positioning which fits the form of the upper cervical spine and relieves any pressure on the shoulder muscles. Body warmth is absorbed slowly by the gel, so a constant and pleasant temperature of the pillow core is ensured. An excellent moisture conduction results due to the modern net technology of the gel layer.

The latex core of this neck support pillow offers elastic, natural and comfortable support. Thanks to the neck rolls in different heights and the removable insert board, the lying height is variable.

The neck support pillows offer perfect anatomical positioning of head and shoulders.

WHICH NECK SUPPORT PILLOW IS RIGHT FOR ME?

TIPS FOR USING NECK SUPPORT PILLOWS

THE CORRECT NECK SUPPORT PILLOW HEIGHT

Neck support pillows come in a wide variety of designs, some of which are adjustable in height thanks to removable inserts. The primary purpose of any neck support pillow is to provide optimal support for the neck and head while relieving strain on the cervical spine. Therefore, it is essential to achieve the straightest and anatomically optimal alignment of the cervical spine in your chosen sleeping position. This applies equally whether you sleep on your side, back, or stomach.

To determine the best neck support pillow height for your personal needs, you should first clarify your preferred sleeping position and whether you sleep on a firm or soft mattress. These factors, along with your individual body type, will influence the ideal height of the neck support pillow for you. Ensure that the pillow not only supports your neck but also keeps your head in a neutral position to prevent tension and discomfort.

THE SLEEPING POSITION

Are you a stomach, back, or side sleeper? While it's true that everyone shifts positions during sleep, the position in which you prefer to fall asleep can help identify your primary sleeping style. Generally speaking, side sleepers require higher neck support pillows than back sleepers, while stomach sleepers benefit from flatter neck support pillows.

THE MATTRESS

Do you sleep on a soft mattress that allows your shoulders to sink deeper, or is your mattress firmer? Generally, if you have a soft mattress that lets your body sink in, you'll need a lower neck support pillow compared to what you'd require for a firmer mattress (with the exception of stomach sleepers).

THE INDIVIDUAL BODY STRUCTURE

Your individual body type significantly influences the ideal height of your neck support pillow. Consider whether you have broad or narrow shoulders, a flat or rounded upper back, and a slim or pronounced neck. The most important factor is that the neck support pillow fits perfectly in your chosen sleeping position, filling the gap between your shoulder area and neck. This ensures that your head rests comfortably while maintaining the natural alignment of your spine.

Brinkhaus

THE CORRECT POSITION ON YOUR BACK

When lying on your back, your head should rest comfortably on the pillow. To check if your position is relaxed, look up gently while lying down. Ensure that you are not tucking your chin towards your chest or straining your neck. In the correct position, your gaze should be nearly vertical, directed at the ceiling. The pillow should fill the gap between your neck and upper back, allowing your head to rest comfortably while supporting the natural curvature of your spine. For optimal support when lying on your back, we recommend using neck support pillows with a height of approximately 8 to 13 cm.

THE PROPER POSITION FOR SIDE LYING

When lying on your side, your head should rest flat on the pillow, ensuring that your cervical spine remains as straight as possible in relation to the rest of your spine. It can be beneficial to have someone else check this alignment for you. We recommend using neck support pillows with a height of approximately 10 to 13 cm for optimal comfort and support while side sleeping.

THE SPECIAL FEATURE: PRONE POSITION

Sleeping on your stomach often leads to tension issues. In this position, the head is turned significantly to one side, causing the muscles and ligaments in the neck to become excessively stretched or compressed. Therefore, stomach sleepers should consider adjusting their lying position by pulling one leg to the side, wrapping the corresponding arm around it, and turning their head in the same direction. This adjustment helps reduce strain on the neck. For this sleeping position, we recommend using a neck support pillow with a height of approximately 6 to 10 cm.

SEALS OF QUALITY

OEKO-TEX®

Product identification with the label “Confidence in Textiles” and the connected proven safety of textile products is an additional sales argument which surveys have found to be more important to consumers than price, functionality or brand. Widespread use and customer awareness of the OEKO-TEX® Standard 100 contribute to the OEKO-TEX® label now having a status similar to that of a brand name and being actively requested by consumers. Marking products with the OEKO-TEX® label therefore provides all textile and clothing manufacturers with valid certificates with an effective way of drawing more attention to their products. Without visible labels, consumers are not in a position to assess the human ecological quality of the textiles.

DOWNPASS

The goal of the DOWNPASS standard is to contribute to the ethical sourcing of down and feathers, and to help companies to firmly anchor and further develop the aspects of animal welfare during the sourcing of feathers and down in everyday business by reviewing suppliers in the industry supply chain. DOWNPASS Standard 2017 stands for No live-pucking, No material from the foie gras production and monitoring the breeding conditions. Down and feathers as by-products of poultry production are only available when geese and ducks are consumed. The supply chain of every company in the bedfeather and bedding industry is international and individual. The standard also represents the way to the large breeding areas as well as to small farms and collectors. Recording down and feathers according to their origin and their way of winning and to implement the aspects of animal welfare is a big task.

THE FABRIC

Which weave to use?

In considering casings and weaves throughout our brochure we refer to thread count. Thread count is calculated by the addition of the number of threads in both directions of the weave, in a one inch direction from a given point. Thus higher thread counts mean finer weaves. As a guide to thread count, we can find bed linen that sometimes carries the term "percale". Nowadays, this is taken to mean weaves where the thread count is a minimum of 180, our casings are very much higher thread counts than this. Part of our art at BRINKHAUS is knowing which weave is particularly suited for the type of filling it will hold. Twill, for example, is a highly versatile weave. It allows for an extremely fine high density thread count for superior strength. In addition, the softer and thicker weft yarn (those across the width) are on the inside, and therefore in contact with the filling. Over time, the fabric becomes matted through use and therefore increases its density. Cambric, a classic linen weave, marries the finest cotton yarns to extreme lightness. We have found this combination ideal for pure down or feather and down mixtures, the finest being a "batiste". Satin weave takes its name from its effect. The high count of warp threads gives a luxurious shiny right side. Because this takes more yarn to achieve, it is an expensive weave. You will find examples of all three in our collection.

NOMITE®

The Nomite® mark indicates that a product is suitable for house dust mite allergy sufferers: because down and feather-filled products offer excellent thermal and climatic conditions for humans (rapid warming up when one is sleeping, rapid decrease in humidity when the bedding is aired), they provide a very poor habitat for house dust mites, which rely on high humidity to live. The tight weave of the down and featherproof fabric acts as a barrier, preventing the mites from passing through, and therefore offers additional protection - so that those who suffer from house dust allergies or asthma can also enjoy the natural comfort afforded by down and feather bedding. This has been demonstrated by scientific research.

DAUNASAN®

Daunasan® stands for the highest standards of quality and sustainability. Our products are certified with renowned quality labels that underscore our commitment to excellent standards and responsible manufacturing processes. Each Daunasan® product carries the OEKO-TEX® Standard 100 certification, which guarantees that it has been tested for harmful substances and is therefore safe for health. By choosing Daunasan®, you not only opt for products that offer maximum comfort but also for an environmentally friendly and sustainable choice. Trust in our quality – for restful sleep and a clear conscience.

QUALITY INDEX

THE FILLING

Which is the best for me?

There is no easy answer to this question. It depends principally on individual taste – warmth required, type of sleeper, ambient temperature as well as climate. Premier goose down is the lightest, giving freedom to move and turn without disturbing rest. Cashmere, camel hair, silk, wool and cotton are other excellent natural fillings that we use. They are heavier than down but in the same way they promote air and moisture movement and respond to body temperature changes. Of these, silk is uniquely body responsive; wool provides warmth with high absorbency to draw off moisture. Cotton is also absorbent and as a natural plant source filling, it is a good option for allergy sufferers, polyester is the man-made alternative in this respect. However, whatever your final choice may be, the same care, attention and finish is applied to every duvet that carries the BRINKHAUS name.

DOWN

The perfect duvet filling, has been used for centuries now. This little miracle of nature, which has countless tiny air pockets between its individual hairs, provides excellent heat insulation and absorbs moisture, immediately transporting it out to the surrounding air. So your body stays warm and dry.

CASHMERE

From time immemorial it has been synonymous with the most precious and fine natural animal hair. It comes from the Cashmere goat which lives in the Central Asian highlands of China and Mongolia. It is characterised by its special softness and smoothness. Cashmere hair acts as a climate regulator and assures excellent sleeping comfort.

CAMEL HAIR

Camel hair has good insulating properties and is more flexible and lighter than wool. Thanks to its outstanding ability to regulate moisture, the duvet is ideal for sleepers who perspire easily. The camel hair duvet is not suitable for people who often suffer from a dust mite allergy.

ALPACA WOOL

The excellent thermal insulation of alpaca hair provides comfortable warmth without overheating. At the same time, the breathable fibers effectively wick away moisture, creating an optimal sleep environment. Additionally, alpaca wool is hypoallergenic since it does not contain lanolin, making it particularly suitable for allergy sufferers. The durable and resilient fibers maintain their shape for years and are lightweight, further enhancing sleep comfort. Overall, alpaca wool bedding offers a harmonious combination of comfort, functionality, and sustainability—an outstanding choice for health-conscious individuals.

SILK

Silk is 100% natural, silk has an absorption of about 30% of its own weight and silk has the special characteristic of immediately being able to release the absorbed moisture into the air. Temperature differences in the body are absorbed by the silk and it is unique in being able to adapt to the body's temperature changes. Silk is derived from the cocoon of silk moth the caterpillar and thus an animal fibre.

QUALITY INDEX

THE TOG RATE

Which "TOG-Rate" should I choose?

The TOG expressed as a number, acts as a guide to the insulation property; more accurately it is the measure of the thermal resistance of a duvet construction. The higher the number, the more the duvet holds heat. For natural fillings other factors such as climate, humidity, ambient temperature and individual preferences are equally important. We also indicate other factors such as weight and warmth. However, it is important to note that other individual factors must be balanced in your final decision.

WOOL

Pure new sheep's wool is one of the oldest hairs used by man. It can absorb up to 30% of its own weight in moisture without ever feeling damp. At the same time, it is able to quickly release this moisture into the surrounding air. So, you get a warm and cosy sleeping environment any time of the year.

COTTON

One of the oldest agricultural crops known to man is also ideal for use as a quilt filling material. It stands out thanks to its excellent capacity for absorbing moisture. However, it does not store this moisture; rather, it quickly releases it into the surrounding air. The result is a pleasant and dry sleeping environment. In addition, it is very easy to care for – washable up to 95 °C – and suitable for people with dust allergies.

MAN-MADE SYNTHETIC FIBRE

Duvets and pillows filled with modern textile fibres are functional, incredibly easy to care for and extremely hygienic, whilst also being cuddly soft and lightweight. As such products are washable at up to 60 °C or 95 °C and are suitable for tumble-drying, they are particularly highly recommended for people with dust allergies.

AIR-FILL®

The AirFill® fiber offers exceptional comfort with its soft, down-like feel, while being vegan and allergy-friendly. It provides excellent breathability and humidity regulation, ensuring a comfortable sleep by absorbing and releasing moisture. The fiber also promotes great air circulation and offers high warmth without heat buildup. Easy to care for, it is washable at 60 °C, making it perfect for allergy sufferers. Combining softness, warmth, and hygiene, AirFill® is a versatile and functional filling material.
